Hi Deb,

I'm here in Ruby finishing up the culvert project. We are fitting the culverts with thaw pipes. One of the culverts was left in place so we need to retrofit thaw pipe hanger hangers (if that makes sense). I'm attaching a sketch.

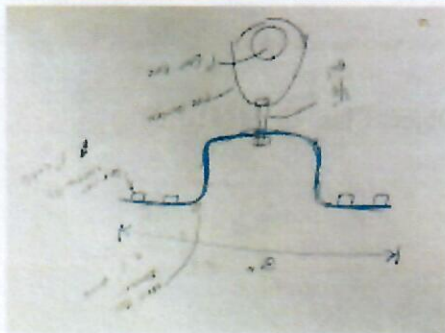

We need (2) 8 ft. pieces of flat 1/16" steel 1 to 1 1/2" wide. Those will be formed into the hangers. To fasten them to the top of the pipe we need 120 ct. of 1" long self tap screws with a 3/8" hex head. We also need the hex head driver for the drill.

I'm leaving tomorrow but I will stay on this string and in touch to make sure they get everything to finish this last part of the project.

You can call or email me if you have any questions.

Nancy

Hi Deb,

I have ordered some more short 1" pipe for this project from C&R pipe. When you get the other parts previously requested can you go over and get those from C&R Pipe to? It will be 2 pieces of 3ft x 1" pipe and some couplers.

Thank You,

Nancy
